

MEASURE! EVERYTHING!

A new, free app from MathTalk, designed to support early math learning for young children, will soon be available in English and in Spanish for both Apple and Android devices!

The **Measure! Everything! App** uses Augmented Reality (AR) technology to bring 3D animals and objects to life in your own home, backyard, community—or wherever you are! Just pick your favorite animal or object—from pandas to dinosaurs to apples and more—and line them up to measure anything and everything around you. Add a virtual sticker or two to the scene, take a picture of what you created, and even share it for your friends to see!

Ready for the next challenge? Children and families can go on exciting math “adventures,” around the house and in the neighborhood to practice measuring and other early math skills—demonstrating progress and earning in-game rewards along the way.

The Measure! Everything! App provides

- ✓ **M**ath learning opportunities to kids, wherever they are
- ✓ **A**dventures-based math exploration that gets kids “up, about and out”
- ✓ **T**alk prompts for meaningful math conversations with young children
- ✓ **H**elp for showing kids that math is everywhere and keeping them learning through rewards!

Available October

ABOUT MATHTALK

MathTalk creates unique opportunities for young children and their families to discover and enjoy math anywhere.
